# Fast & Easy Classification Intelligence
For sensitive, regulated or business-critical data.

CLASSIFICATION INTELLIGENCE IS BUSINESS INTELLIGENCE.

Classification intelligence unravels the complexities of managing where valuable information is stored, accessed, and secured.

From high-level data classification to granular exact word matching, data must be identified with accuracy and precision for effective classification intelligence.

However, classification intelligence goes beyond simply identifying content; it's about ensuring continuous oversight of protected and governed data.

Inspect-Data lifts the veil of unchecked data sprawl with unparalleled clarity to help businesses manage their vast expanses of data with confidence, equipped with actionable insights that guide timely and informed decisions.

Inspect-Data delivers powerful classification intelligence into any 3rd party platform or application, enabling the identification of sensitive, regulated, or business-critical data. Inspect-Data simplifies classification intelligence across cloud, networks, applications, databases, and endpoints to instantaneously expose compliance and security risks. Inspect-data offloads the cost and complexity of developing data inspection and management functions so you can focus on your core solution.

Key Features

Deep Visibility with Minimal Effort
Inspect-Data provides cost-effective classification intelligence out of the box and automatically flags protected data without any further policy configuration. Inspect-Data ships with hundreds of global regulatory and industry-specific content identifiers which are continuously updated by our expert team and further customizable for unique use cases.

Support Across Multiple Data Types, Including OCR
Inspect-Data extracts and analyzes text from a wide range of file types or streamed text and can even identify sensitive content within images such as a passport.

BUILD VS BUY

Your ability to meet market demands for fast and accurate classification intelligence must not be hindered by the high cost to develop, integrate, and support product features that require deep subject expertise outside of your team's core competency.

Inspect-Data is purpose-built to deliver and easily integrate advanced data knowledge toolkits for any platform or application as if it was developed in-house.

SIMPLER DEPLOYMENT

Inspect-Data is designed for easy deployment to enable low maintenance, support, and infrastructure requirements.

It can be delivered either as an integrated software development kit (SDK) for your current platform and applications, or configured as a Cloud Service.

Inspect-Data's robust and modular architecture provides a simple solution that can be tailored to address complex business needs.

TIME TO INTELLIGENCE

Experience high-performance data processing without sacrificing accurate analysis.

Achieve real-time classification intelligence with 20X the speed compared to legacy content inspection technology.

Dive into detailed text and file analyses to pinpoint protected data and risky behavior to gain comprehensive insights into data usage patterns.

Compliance Made Easy

Inspect-Data streamlines and simplifies the expensive process of maintaining compliance with complex and evolving data privacy laws including GDPR, CCPA, HIPAA, PIPEDA, SOX, and PCI.

High-Performance and Scalability

Inspect-Data can process large files i.e. megabytes in mere milliseconds, ensuring fast insights and low latency as enterprise data volume expands.

Minimal False Positives

Inspect-Data machine learning engines are continuously trained and refined to deliver reliable analysis across most data types that accurately identify genuine risks and anomalies.

Exact and Partial Data Matching

Inspect-data uses advanced data fingerprinting techniques to create unique identifiers with support for very large data sets i.e. 2B+ records.

SDK Integration

Inspect-Data's SDK supports C/C++, C# (.NET), GO, and Java, and was designed for easy integration into existing system including Windows, MacOS, Linux Alpine, Ubuntu, and RHEL/CentOS to ensure a seamless transition and minimal disruption to ongoing operations.

Cloud Service

Inspect-Data provides classification intelligence between cloud applications via open APIs to facilitate seamless analysis and data protection on platforms outside of the enterprise.

Actionable Dashboards

Get a clearer visual representation of data usage and risk areas, enabling more informed decision-making.
